Reviews

Bhushan Lakhe:

Very good initiative in bringing together a wealth of information in a structurally compiled, consolidated document. This takes a lifetime as an exceptional Data Engineer and also a wish to give back to the professional community one is part of! So, congratulations!

Who (and how) can use this document and for what? Well, it's an extremely handy collection of Data Engineering methods to implement open Lakehouses, enhance and supplement your data pipelines with state-of-the-art components and best practices. Most importantly, it helps you in effectively using open source components to reduce operational costs for your data processing needs.

What's helpful is that the authors have spent time explaining the key concepts (and terms) before demonstrating how (and where) you can use them (for example, how partitioning works and has involved, before showing how you create partitions)! Also, I found the Iceberg feature coverage really extensive and then of course is the discussion about integration with all leading catalogs and cloud platforms. I feel, this is the heart of this compilation and I'm sure, the Data Engineering community will use (and enjoy) this the most! Most of us need to use these integrations as organizational (or technical) needs and there's no detailed compilation available to cater to our needs, except the present one!

I really welcome this effort wholeheartedly and I'm sure you'll enjoy (and use) this, as much as I have.

Sincerely,
Bhushan Lakhe

Raja Purkayastha:

Being an avid follower of ambariCloud's Open Lakehouse-Iceberg posts/blogs. Undeniably Open Lakehouse-Iceberg must rule the future of enterprise bigdata ecosystem. The challengers are way behind rather unreachable.

Open Lakehouse - Iceberg - 108 Recipes is an invaluable reference recommended for purposeful bigdata companies to harness & leverage benefits of in-depth vision, extensive analysis & relentless research.

Satya Kondapalli & Ravi Gurram, I salute your remarkable initiative unleashing the power of Iceberg. These impeccable recipes are profoundly proven, tested & implemented.

Sincerely,
Raja

Anil Koripelly:

Open Lakehouse Iceberg: 108 Recipes by Satya Kondapalli and Ravi Gurram is a thoughtfully crafted and highly practical guide for data professionals looking to harness the full potential of Apache Iceberg. With its recipe-style structure, the book expertly bridges foundational concepts and advanced techniques, making it an accessible and comprehensive resource for both novices and seasoned data engineers. The authors have taken time to list out the differences between hive and iceberg is our paramount help for firms that are moving from hive to iceberg

The authors excel in providing actionable solutions to real-world challenges, covering topics such as schema evolution, partitioning, metadata management, and integration with tools like Hive, Snowflake, and AWS Glue. What sets this book apart is its focus on practical applications, offering clear step-by-step instructions paired with insights into modern data architectures like Open Lakehouse.

Written with clarity and passion, this book reflects the authors' deep expertise and commitment to empowering the data community. It's an invaluable reference for anyone aiming to build robust, scalable, and future-ready data ecosystems. Whether you're migrating from legacy systems or optimizing workflows, this guide is a must-read. Thank you Satya for giving me an opportunity to be one of the first to review the recipes and I thoroughly enjoyed reading and trying out many recipes.

Sincerely,
Anil
